

## CAN BUS – LIN BUS ALARM

with speaker **LC800**

with radio frequency speaker **LC800-RF**

with battery backup siren **LC801**

with radio frequency battery backup siren **LC801-RF**

Modular alarm that interfaces to the original remote control of the car. The CAN-bus and LIN-bus (for PSA group) technologies of the system dialogue with the car control unit optimizing installation times and eliminating any possibility of error.

The system comes with emergency electronic key and LED socket, ultrasonic capsules to be placed in the cockpit. The ultrasound module is integrated into the control unit.

### Immobilizer:

- Fuel pump block
- Starter lock

**5 INPUTS**  
**4 OUTPUTS**

Programming and updates  
by USB cable

You don't need a PC to program the car.  
The list of cars is already coded in the  
control unit, the desired code must  
simply be composed with the button.

It is possible to install the systems on  
analog vehicles with PLIP as an  
interface of the original radio control  
systems.
